

# BrosephTech Bot - Quick Reference

Voice meetings to tasks · accountability board · live dashboard

## RECORD A MEETING INTO TASKS

1. Join a voice channel, run **/record start**. Each person is recorded on their own track.
2. Talk. **/record status** shows who's been heard.
3. Run **/record stop** (optionally **title:Weekly sync**). You get a structured recap (TL;DR, decisions, blockers), a task checklist, and the transcript file.
4. Tick the real tasks and hit **Create selected**. Each becomes a board card + Jira issue, and the full recap posts to **#bt-meetings** and the dashboard.

Transcription runs locally - audio never leaves the machine. Recaps use the Claude API.

## COMMANDS

|                           |                                          |
|---------------------------|------------------------------------------|
| <b>/guide</b>             | this sheet in Discord, with walkthroughs |
| <b>/record</b>            | start · stop · status · jiracheck        |
| <b>/dashboard</b>         | live command centre + Refresh            |
| <b>/mytasks</b>           | your own cards, worst first              |
| <b>/board · /blocked</b>  | the kanban, and what cannot move         |
| <b>/scorecard</b>         | a crew member's standing                 |
| <b>/meeting</b>           | capture from pasted notes                |
| <b>/metrics</b>           | log · show channel growth                |
| <b>/standup · /digest</b> | post standup / weekly digest now         |
| <b>/setup</b>             | build the HQ channels, re-runnable       |

## DRIVING A CARD (AUTOCOMPLETE ON THE TITLE)

|                      |                                |
|----------------------|--------------------------------|
| <b>/card add</b>     | create it in Ideas             |
| <b>/card done</b>    | ship it to Published           |
| <b>/card move</b>    | push it to another column      |
| <b>/card block</b>   | flag it, with what it waits on |
| <b>/card unblock</b> | clear the flag                 |
| <b>/card assign</b>  | hand it to someone             |

## DASHBOARD

Open in a browser:

```
http://<host>:<port>/?k=YOUR_TOKEN
```

**Do next** (what to act on now), **Latest meeting** recap, KPIs, department donut, board pipeline, per-crew load, work needing attention, a live **Jira kanban**, and meeting history. Read-only; auto-refreshes every 20s. Add **&demo=1** to preview.

## SCHEDULES

|                    |                                          |
|--------------------|------------------------------------------|
| <b>09:30 daily</b> | standup: what needs a human today        |
| <b>12:00 daily</b> | blocked sweep, owners pinged             |
| <b>18:00 daily</b> | private nudge, only if you owe something |
| <b>Mon 09:00</b>   | weekly digest: who shipped what          |

## SETUP (BT-BOT/.ENV)

```
# AI summaries + tasks
ANTHROPIC_API_KEY=

# Local transcription
WHISPER_CMD= WHISPER_MODEL=

# Jira push
JIRA_BASE_URL= JIRA_EMAIL=
JIRA_API_TOKEN= JIRA_PROJECT_KEY=

# Web dashboard
DASHBOARD_TOKEN=
```

**npm run deploy** to register commands, then **npm start**. Restart after any .env change.

STATUS AT A GLANCE

|          |                                 |
|----------|---------------------------------|
| red      | overdue                         |
| orange   | gone quiet, 5 days untouched    |
| yellow   | due within 2 days               |
| green    | healthy and moving              |
| no entry | blocked, sorts first everywhere |
