

# BrosephTech Bot - Quick Reference

Voice meetings to tasks · accountability board · live dashboard

## RECORD A MEETING INTO TASKS

- 1. Join a voice channel, run **/record start**. Each person is recorded on their own track.
- 2. Talk. **/record status** shows who's been heard.
- 3. Run **/record stop** (optionally **title:Weekly sync**). You get an AI summary, a task checklist, and the full transcript as a file.
- 4. Tick the real tasks and hit **Create selected** - each becomes a board card and a Jira issue.

Transcription runs locally - audio never leaves the machine. Summaries use the Claude API.

## COMMANDS

|                                  |                                   |
|----------------------------------|-----------------------------------|
| <b>/record</b>                   | start · stop · status · jiracheck |
| <b>/dashboard</b>                | live snapshot embed + Refresh     |
| <b>/metrics</b>                  | log · show channel growth         |
| <b>/meeting</b>                  | capture from pasted notes         |
| <b>/board</b>                    | board health summary              |
| <b>/mytasks</b>                  | your active / overdue cards       |
| <b>/scorecard</b>                | a crew member's accountability    |
| <b>/card add</b>                 | create a board card               |
| <b>/blocked</b>                  | cards still needing unblocking    |
| <b>/standup</b> · <b>/digest</b> | post standup / weekly digest now  |

## DASHBOARD

Open in a browser:

`http://<host>:<port>/?k=YOUR_TOKEN`

KPIs, department donut, board pipeline, per-crew load, work needing attention, live Jira board, recent meetings + recordings, and channel-growth sparklines. Auto-refreshes every 20s. Add `&demo=1` to preview.

## SETUP (BT-BOT/.ENV)

```
# AI summaries + tasks
ANTHROPIC_API_KEY=
# Local transcription
WHISPER_CMD= WHISPER_MODEL=
# Jira push
JIRA_BASE_URL= JIRA_EMAIL=
JIRA_API_TOKEN= JIRA_PROJECT_KEY=
# Web dashboard
DASHBOARD_TOKEN=
```

**npm run deploy** to register commands, then **npm start**. Restart after any `.env` change.
